Efficiency

US mandates 163 grams / mile
and 54.5 MPG by 2025

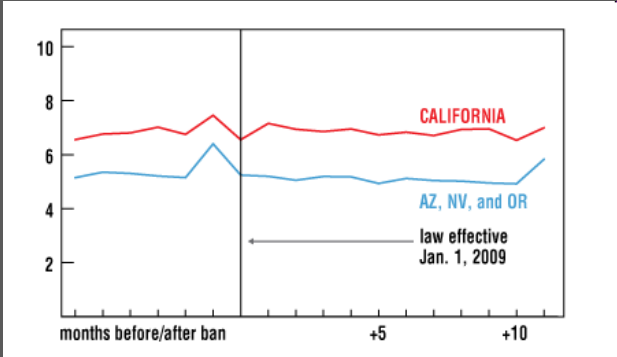

Reducing PM10 / CO₂

CONSUMERS INCREASINGLY UTILIZE OTHER MEDIA IN THE VEHICLE. CREATING LAWS PROHIBITING THEM IS NOT THE SOLUTION

Interaction with phones and social media while in the vehicle is inevitable...

...the response, thus far, has been laws prohibiting the use of phones while driving...

Collision claims per 100 insured vehicle years, by month before and after texting law for all drivers

... study finds no reductions in crashes after laws take effect that ban texting

Among 18-25 year-olds, the group most likely to text

45% in states with bans

48% in states without bans

Source: Nuance Communication, 2008. Highway Loss Data Institute (HLDI), 2010

Finding a safe way to enable that interaction requires technology and connectivity solutions

WATSON and Cognitive interaction increases safety in the vehicle

- Keeps the vehicle in an “ideal road position”, **19% more** than manual dialing and **40% faster** to make a call.
- **Manually** selecting music on a MP3 player made the driver **50% more distracted** and doubled the amount of time to change lanes

Heads-up display allows for ‘eyes on the road’ driving

- Projected dashboard and navigation
- Sign-recognition
- “virtual” road edge and lane edge for bad weather conditions
- Night vision

Driver focused clustering reduces the time needed to access and review information

- Five way controllers on steering wheels
- Displays in visually ‘friendly’ areas
- Using color to convey functionality

Attention monitoring systems improve driver alertness levels

- Audio and visual warnings for:
- Lane departures
 - Speed warnings
 - Pedestrian crossing
 - Collision warnings

Telematics will be deployed in different configurations, effecting how the vehicle is personalized

Built In

Beamed In

Brought In

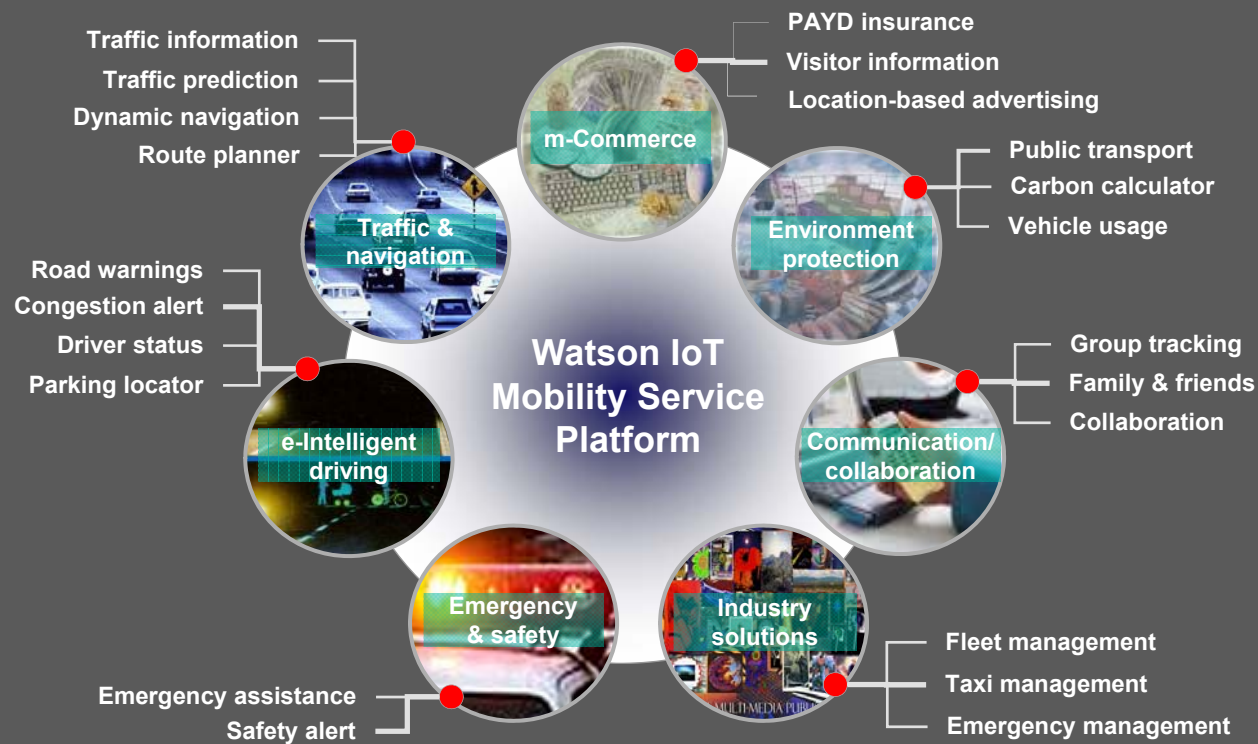

- *Emergency assistance*
- *Vehicles health reporting*
- *Security and safety*
- *Battery management*
- *Autonomous / ADAS*
- *Cognitive Interactions voice and gesture*
- *Weather*
- *Traffic management*
- *Points of interest*
- *Business listings*
- *Video, Radio, VR*
- *Driving routes / navigation*
- *Music and video*
- *Calendar*
- *Social Media*
- *E-mail and SMS*

Hybrid models are emerging that require integration points...

...depending on what the application is best suited for

New Watson IoT technology's enable many potential value-added services in Travel and Transportation

US mandates 163 grams / mile
and 54.5 MPG by 2025

Reducing PM10 / CO₂

European/Russian legislation leads to e-Call Mandatory 31 march 2018

eCall technology can save thousands of lives each year, reducing the emergency services reaction time by 50% rural and 40% in urban areas

**This technology will also assist in solving other treats to drivers like:
Car theft, robbery, hijacking and kidnapping by vehicle tracking.**

eCall Status, cellular in band modem and third party 3G/4G implementations in the market

•Specification approved standardization

- Pan European eCall Operating Requirements
- Minimum Set of Data (MSD)
- Application Requirements
- **The "Third Party eCall" already implemented**
- the eCall discriminator ('eCall flag') agreed
- Safe automatic call also when driver is unconscious
- Verification via voice link
- Use of eCall flags to distinguish automated/manual calls)

•Positive response on eCall Public consultation strongly supports eCall introduction

•**EU** mandatory introduction march 31, 2018 for all new type approvals. Legislation approved

•**Russia** adopted eCall already, based on extra insurance fee for cars not equipped

•eCall service shall comply with privacy and data protection recommendations provided by art. 29 WP

• 20 Member and 3 Associated States have signed

- More countries have announced their signature
- Commitment from the automotive ACEA and telecom industry (GSM Association Europe)
- 120+ other organizations have signed as well, representing all the stakeholders involved

Car sensors in Watson IoT platform with V2X for Aquaplaning prediction

IBM.

**Increase safety
and driving
experience**
Hyper local weather
will help car and
driver to drive safer

Current weather data is not local. With The Weather Company's hyper local weather, the car can adapt to the road conditions before it gets dangerous.
(example case proposed to Porsche)

The Weather Company: Sensor Data combined with Watson IoT

26 Billion
daily forecasts
/ visits for
2.2 billion
weather
forecast

Daily Data
from
50 Million
mobile
devices:
location &
pressure

Atmospheric
data from
50,000 flights
per day

250,000
worldwide
weather
stations
100TB of
data per day

1000+ radar
locations
150+
meteorologists

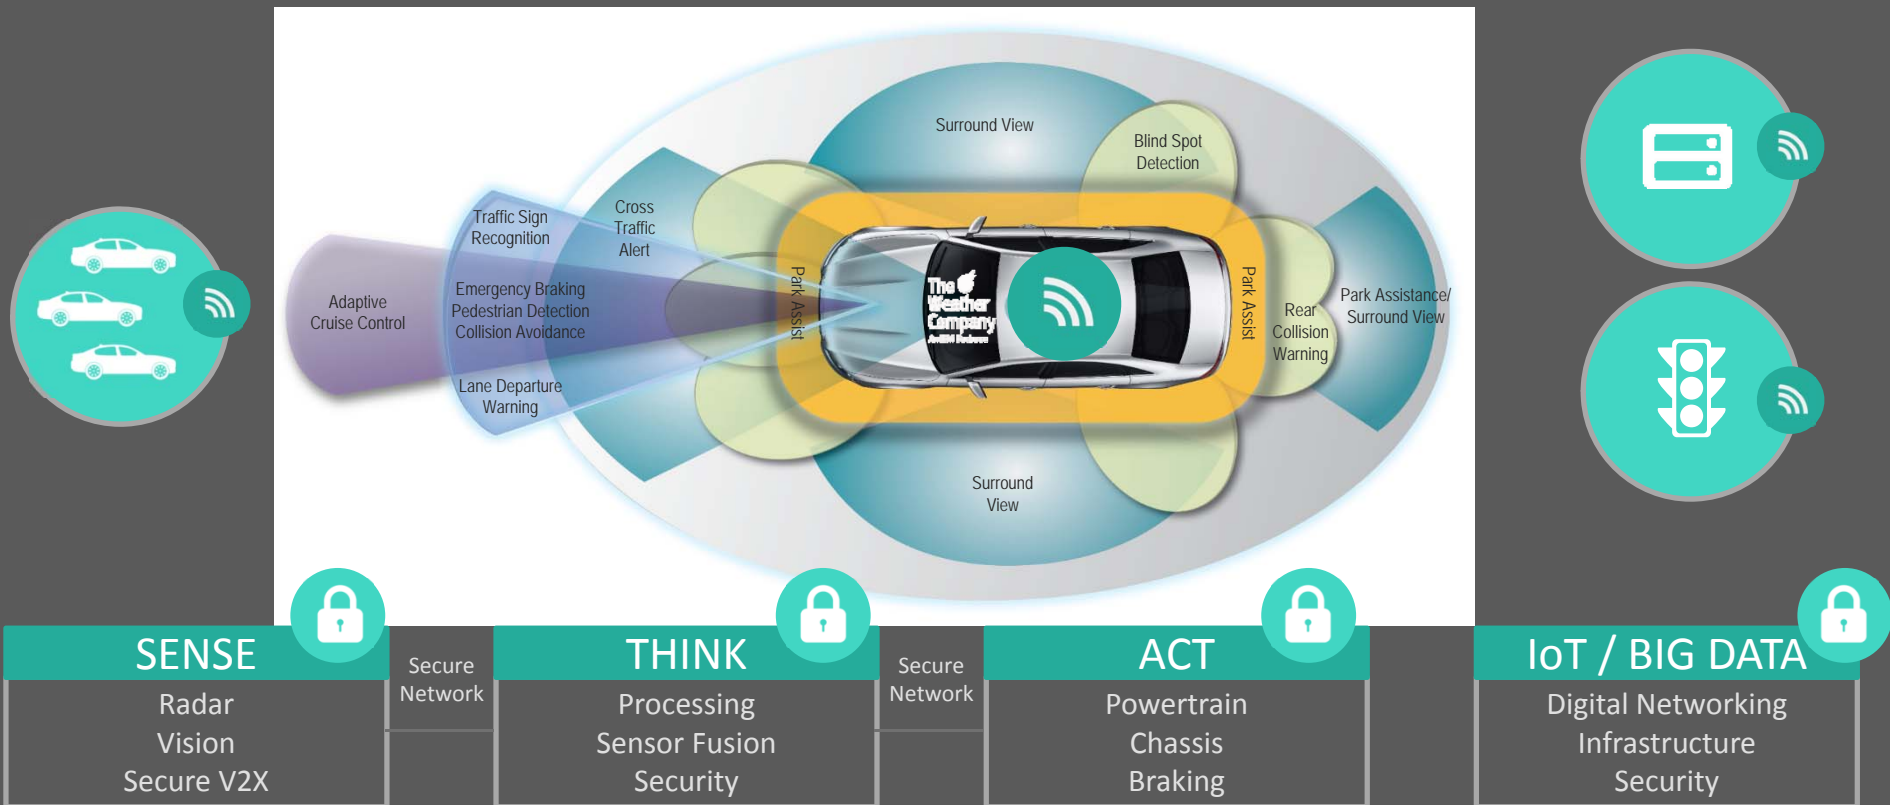

The
Weather
Channel

The
Weather
Company
An IBM Business

ForecastWatch.com:

"TWC gives the most accurate weather prediction for the last 7 years (2010 - 2016) across all regions and timeframes after analyzing 142 Million forecasts from 11 different providers"

EXTENDING SENSING BEYOND THE VEHICLE & LINE OF SIGHT

Motorcycle approaching / „do not pass!“

Roadworks beyond line-of-sight

Platooning / cooperative driving
5m gap @ 80km/h based on 802.11p low latency

Emergency vehicle around corner

802.11p required for Safety-critical V2X features:

Low Latency, Secure & Beyond-line-of-sight

Providing additional safety data earlier than any other sensor can „see“

CAR-TO-CAR AND CAR-TO-INFRASTRUCTURE COMMUNICATION

A paradigm shift in mobility

Solutions to **avoid accidents**, **improve traffic flow** and **enable autonomous driving**

Automotive communication standard IEEE802.11p is derived from IEEE802.11a/g (today's WiFi standard in computing)

V2X COMMUNICATION – IEEE 802.11P

Dedicated Short Range Communication (DSRC) between cars, roadside infrastructure etc

- ‘WiFi-like link’ upgraded for high speed automotive: [IEEE 802.11p](#)
- Optimized for mobile conditions, including multi-path reflection situations
- **Dedicated** reserved frequency band at 5.9 GHz (several 10 MHz channels)
- Typical 500-1500 meter range
- Can ‘look around corners’ thanks to reflections

Does not rule out other communication channels (cellular 4G and LTE 14+ => 5G)

- 802.11p focuses on short range low latency, complementing the long range / more latency cellular network
- Autonomous driving capacity requirements need more than DSRC can offer in current standard
- Different use cases, different requirements => Consumer Value added services
- On the edge computing (Watson IOT) with cellular networks
- Connected value added services

V2X – DRIVING GLOBAL DEPLOYMENT OF ENHANCED ROAD SAFETY

Europe

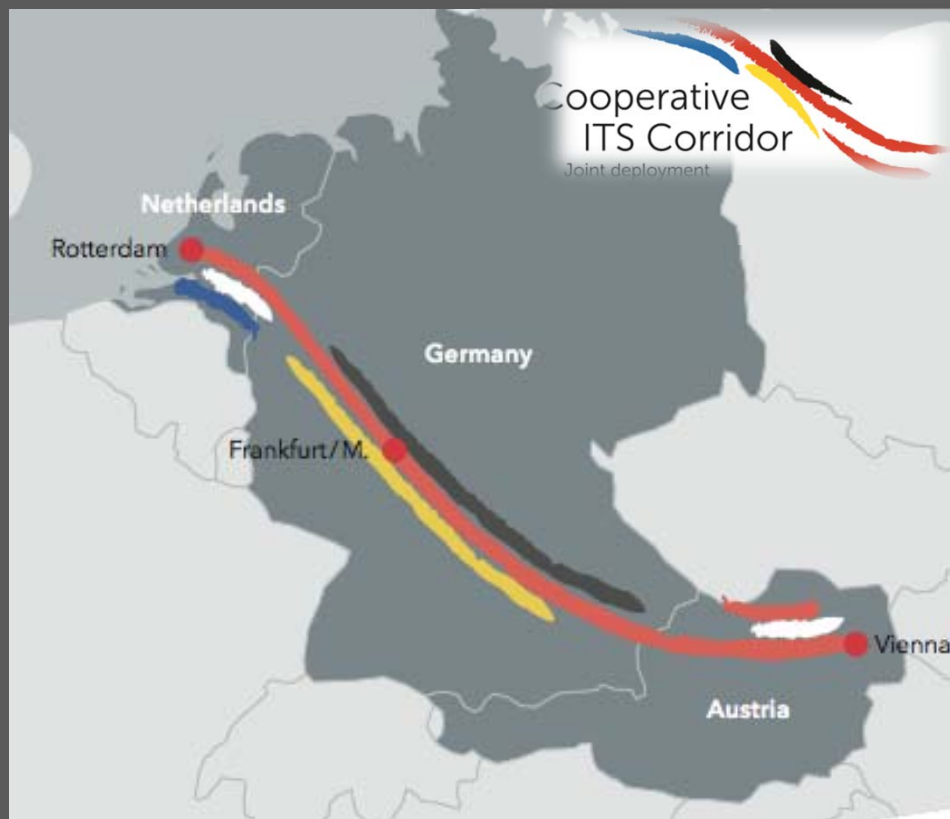

- Car2Car Consortium prepares deployment 2019 onwards
- Connect Motorcycle Consortium starts 2020
- EU issued final framework for Cooperative-ITS
- Declaration of Amsterdam
- Cooperative ITS corridor deployment started
- EU truck platooning challenge (DAF, Volvo, Scania, Daimler)

Asia

- China: DSRC under evaluation, many trials
- Japan/Toyota: V2X (760MHz Japan standard) safety package launched already 2015
- Singapore: ERPII award for 2018 deployment
- Korea: Plan to mandate from 2020, C-ITS deployment from 2018 onwards

DEPLOYMENT IN EUROPE: COOPERATIVE ITS CORRIDOR

MOU between The Netherlands, Germany and Austria to deploy cooperative mobility on this corridor to improve traffic safety and reduce congestion

TRUCK PLATOONING

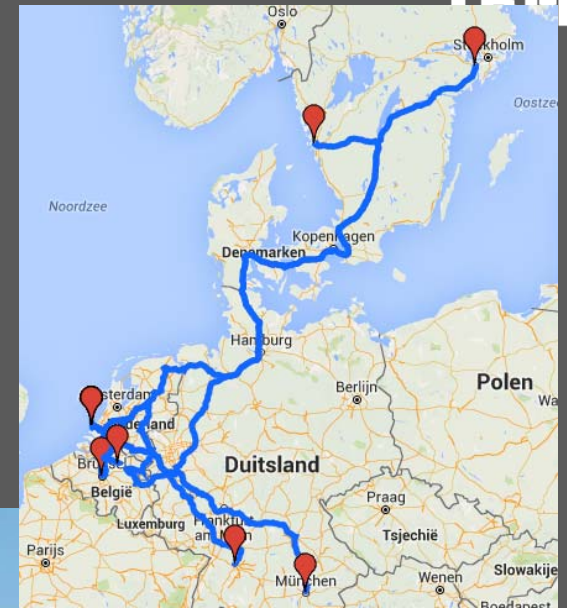

Declaration of
Amsterdam

Cooperation in the
field of connected
and automated
driving

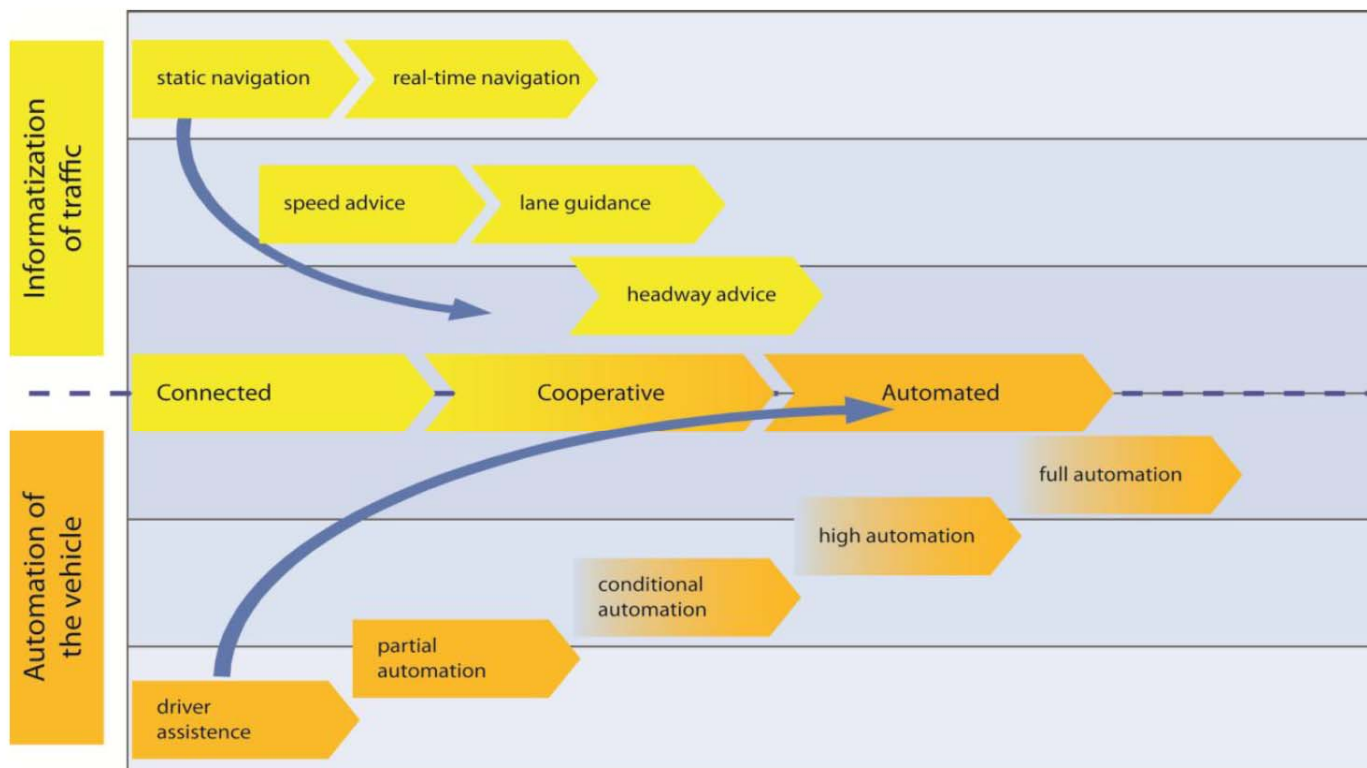

14-15 April 2016

TBM.

DEPLOYMENT IN EUROPE: DECLARATION OF AMSTERDAM

Connected, cooperative and automated driving developments should come together to harvest societal benefits.

V2X – DRIVING GLOBAL DEPLOYMENT OF ENHANCED ROAD SAFETY

USA

- V2X Notice of Proposed Rule Making released end 2016 preparing Mandate of 802.11p
 - DSRC compliant technology at 5.9GHz
 - PKI / SCMS based security
 - Proposed Schedule:
 - 2021 50% of new cars need to have DSRC
 - 2022 75%
 - 2023 100%
- General Motors' Cadillac already shipping, ahead of US mandate
- US DOT / Smart City Challenge Partnership (IBM + NXP)

SAFE & SECURE MOBILITY – 90% INNOVATION THROUGH INTERNET OF THINGS (IOT)

THE US WILL MANDATE V2X TECHNOLOGY WITHIN 5 YEARS

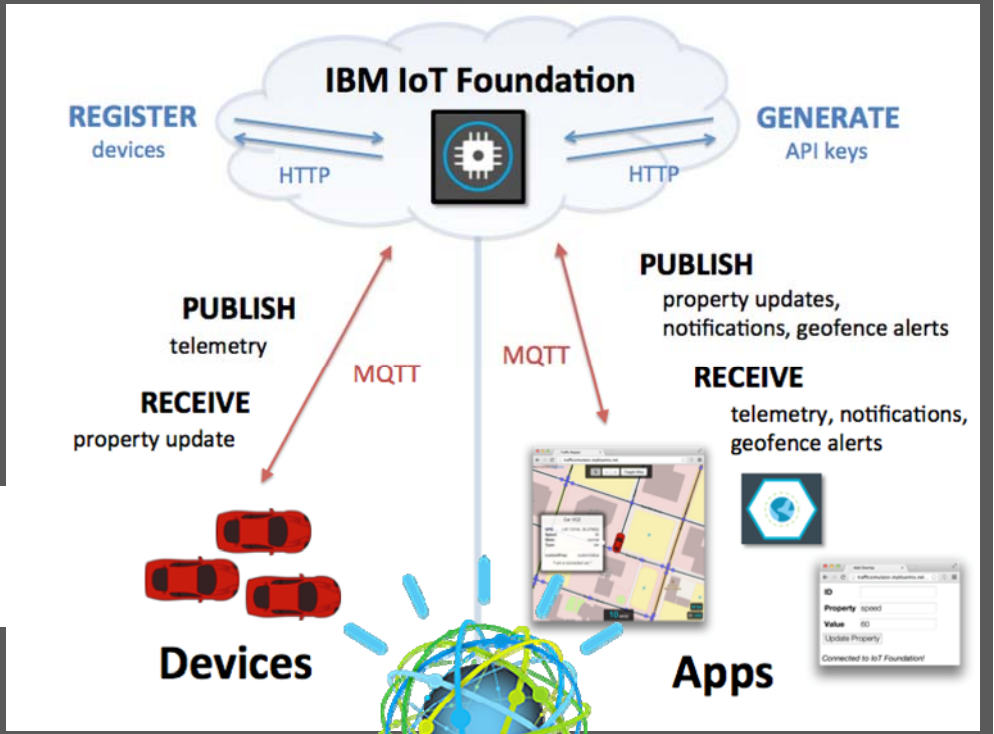

CES

U.S. Secretary of Transportation, Anthony Foxx

Cadillac to Introduce Advanced 'Intelligent and Connected' Vehicle Technologies on Select 2017 Models
Super Cruise and V2V technologies slated for production in about two years

The world's first V2X in series-produced vehicles

IBM Watson

Connected cars will be differentiated through business models that sustain new value streams

An IoT platform for growth includes:

Use Case Portfolio

- Designed to enable a nearly limitless set of potential use cases through V2x data interchange
- Enable use cases rapidly through a powerful recipe-based interface
- Contains sophisticated automotive use case solutions such as Advanced Driver Assistance Services (ADAS) and multi-layered, mapping technology that supports multiple vendors providing real time for autonomous driving

Vehicle to Cloud IoT Platform

- Deployed through cloud, hybrid cloud or as an on-premises solution
- Built on open standards supporting a range of industry protocols and integration with third party services
- A rich set of advanced analytical tools to handle data streaming, modeling, reporting along with image and natural language processing

Technology Infrastructure

- Secure two-way vehicle communications through a hybrid cloud that scales to tens of millions of vehicles across the globe
- Globally distributed cloud data centers that can be in compliance with consumer privacy laws that vary internationally
- Priced per vehicle to alleviate large up-front costs

By 2020, the connected car will be the

#1
connected
application*

200
million

cars will be connected in 2015 and fully packed with sensor technologies**

By 2020, connected vehicles will produce

350MB
of data per
second***

The portfolio of use cases is practically limitless

Connectivity is enabling the Watson IoT use cases and solutions

Solutions need to be:

- Customer focused
- Enterprise focused

Driving real benefits for the users!

Offering **Limitless opportunities** for implementation.

#IBMAutomotive

IoT for automotive deconstructed

The next generation of connected cars will be built on high-performing and fully scalable platforms

The portfolio of use cases is practically limitless

Customer-focused **Enterprise-focused**

Connected cars will be differentiated through business models that sustain new value streams

An IoT platform for growth includes:

Use Case Portfolio

- Enables to create a ready-to-use set of profitable use cases through IoT data intelligence
- Enables to create quality through a powerful usage-based insurance
- Enables to create new revenue streams through data-driven services (e.g. predictive maintenance, predictive health, predictive insurance, predictive maintenance, predictive health, predictive insurance, predictive maintenance, predictive health, predictive insurance)

Vehicle to Cloud IoT Platform

- Enables to create a ready-to-use set of profitable use cases through IoT data intelligence
- Enables to create quality through a powerful usage-based insurance
- Enables to create new revenue streams through data-driven services (e.g. predictive maintenance, predictive health, predictive insurance, predictive maintenance, predictive health, predictive insurance)

Technology Infrastructure

- Enables to create a ready-to-use set of profitable use cases through IoT data intelligence
- Enables to create quality through a powerful usage-based insurance
- Enables to create new revenue streams through data-driven services (e.g. predictive maintenance, predictive health, predictive insurance, predictive maintenance, predictive health, predictive insurance)

By 2020, the connected car will be the **#1** connected application

200 million cars will be connected in 2020 and fully powered with sensor technologies*

By 2020, connected cars will produce **350 MB** of data per second*
